Subject: RE: plastics list

I'll need to ask...

Yeah. Thanks for that intel. I guess it makes sense since it is halogenated. Does your colleague see an advantage to not having an explicit list for non-halogenated polymers? Maybe there would be confusion about co-polymers like ABS, which I think are technically covered by the polymers listed, but maybe would cause confusion if they're not explicitly listed...and I assume the list of co-polymers is very long.

So...EU did not give much a reason why they get rid of the non-halogenated list. But I just checked my notes, and I'm told by my colleague that PVC would actually come under the second bullet (cured waste...).
